shop-generator生成商品和品牌pojo、mapper

修改shop-generator项目的配置文件,运行util工具类:

- 1. 生成商品(t_goods) pojo和mapper
- 2. 生成品牌 (t_brand) pojo和mapper

Controller控制层

GoodsController.java

```
/**
* 商品-列表-页面跳转
* @return
@RequestMapping("list")
public String GoodsList(){
   return "goods/goods-list";
}
/**
* 商品-新增-页面跳转
* @param model
* @return
@RequestMapping("add")
public String GoodsAdd(Model model){
  List<GoodsCategory> gcList = goodsCategoryService.selectCategoryTopList();
  model.addAttribute("gcList", gcList);
  List<Brand> brandList = brandService.selectBrandList();
  model.addAttribute("brandList", brandList);
   return "goods/goods-add";
}
```

Service服务层

BrandServicel.java

```
package com.xxxx.manager.service;
import com.xxxx.manager.pojo.Brand;
import java.util.List;

/**

* 商品品牌服务类

* @author zhoubin

*/
public interface BrandService {
```

```
* 查询所有商品品牌

* @return

*/
List<Brand> selectBrandList();
}
```

BrandServiceImpl.java

```
package com.xxxx.manager.service.impl;
import com.xxxx.manager.mapper.BrandMapper;
import com.xxxx.manager.pojo.Brand;
import com.xxxx.manager.pojo.BrandExample;
import com.xxxx.manager.service.BrandService;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.stereotype.Service;
import java.util.List;
/**
* 商品品牌服务实现类
* @author zhoubin
* @since 1.0.0
*/
@service
public class BrandServiceImpl implements BrandService
  @Autowired
  private BrandMapper brandMapper;
   /**
   * 查询所有商品品牌
   * @return
   */
  @override
   public List<Brand> selectBrandList() {
      return brandMapper.selectByExample(new BrandExample());
  }
}
```
