

# 乐字节教育高级架构课程

正所谓"<mark>授人以鱼不如授人以渔</mark>", 你们想要的 Java 学习资料来啦!不管你是学生, 还是已经步入职场的同行, 希望你们都要珍惜眼前的学习机会, 奋斗没有终点, 知识永不过时。

## 扫描下方二维码即可领取

## 添加单点登录环境

#### 订单系统配置拦截器

shop-order的OrderLoginInterceptor.java

```
package com.xxxx.order.interceptor;
import com.alibaba.dubbo.config.annotation.Reference;
import com.xxxx.common.pojo.Admin;
import com.xxxx.common.util.CookieUtil;
import com.xxxx.common.util.JsonUtil;
import com.xxxx.sso.service.SSOService;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.beans.factory.annotation.Value;
import org.springframework.data.redis.core.RedisTemplate;
import org.springframework.stereotype.Component;
import org.springframework.util.StringUtils;
import org.springframework.web.servlet.HandlerInterceptor;
import org.springframework.web.servlet.ModelAndView;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import java.util.concurrent.TimeUnit;
/**
* 订单登录拦截器
* @author zhoubin
* @since 1.0.0
*/
@Component
public class OrderLoginInterceptor implements HandlerInterceptor {
  @Reference(interfaceClass = SSOService.class)
  private SSOService ssoService;
  @value("${user.ticket}")
  private String userTicket;
  @value("${ego.portal.url}")
  private String portalUrl;
  private static final String COOKIE_NAME = "userTicket";
  @Autowired
  private RedisTemplate<String, String> redisTemplate;
  //请求处理的方法之前执行
  //如果返回true,执行下一个拦截器或者目标程序,如果返回false,不执行下一个拦截器或者目标程序
```

```
@override
   public boolean preHandle(HttpServletReguest request, HttpServletResponse response,
Object handler) throws Exception {
     //获取用户名票据
     String ticket = CookieUtil.getCookieValue(request, COOKIE_NAME);
     if (!StringUtils.isEmpty(ticket)) {
        //如果票据存在,进行验证
        Admin admin = ssoService.validate(ticket);
        //将用户信息添加至session中,用于页面返显
        request.getSession().setAttribute("user", admin);
        //重新设置新的失效时间
        redisTemplate.opsForValue().set(userTicket + ":" + ticket,
JsonUtil.object2JsonStr(admin), 30,
              TimeUnit.MINUTES);
        return true;
     }
     //票据不存在或者用户验证失败, 重定向前台门户登录页面
     response.sendRedirect(portalUrl + "login?redirectUrl=" + request.getRequestURL());
     return false;
  }
  //请求处理的方法之后执行
   @override
   public void postHandle(HttpServletRequest request, HttpServletResponse response, Object
handler,
                        ModelAndView modelAndView) throws Exception {
  }
   //处理后执行清理工作
  @override
   public void afterCompletion(HttpServletRequest request, HttpServletResponse response,
Object handler,
                              Exception ex) throws Exception {
  }
}
```

shop-order的MvcConfig.java

```
package com.xxxx.order.config;

import com.xxxx.order.interceptor.OrderLoginInterceptor;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.context.annotation.Configuration;
import org.springframework.web.servlet.config.annotation.EnablewebMvc;
import org.springframework.web.servlet.config.annotation.InterceptorRegistry;
import org.springframework.web.servlet.config.annotation.ResourceHandlerRegistry;
import org.springframework.web.servlet.config.annotation.WebMvcConfigurer;
```

```
* @author zhoubin
 * @since 1.0.0
*/
@Configuration
@EnablewebMvc
public class MvcConfig implements WebMvcConfigurer {
  @Autowired
   private OrderLoginInterceptor loginInterceptor;
   * 放行静态资源
   * @param registry
   */
  @override
   public void addResourceHandlers(ResourceHandlerRegistry registry) {
      registry.addResourceHandler("/static/**").addResourceLocations("classpath:/static/");
  }
   /**
   * addInterceptor:添加自定义拦截器
      addPathPatterns:添加拦截请求 /**表示拦截所有
   * excludePathPatterns: 不拦截的请求
    * @param registry
   */
  @override
   public void addInterceptors(InterceptorRegistry registry) {
      registry.addInterceptor(loginInterceptor)
           .addPathPatterns("/**")
            .excludePathPatterns("/static/**")
           .excludePathPatterns("/login/**")
            .excludePathPatterns("/image/**")
            .excludePathPatterns("/user/login/**")
            .excludePathPatterns("/user/logout/**");
  }
}
```

### 前台系统修改Controller

精确匹配订单系统发出的login请求,获取重定向url参数 shop-portal的PageController.java

```
/**

* 精确匹配登录

* @param redirectUrl

* @param model

* @return

*/

@RequestMapping("login")

public String login(String redirectUrl, Model model){

    model.addAttribute("redirectUrl", redirectUrl);

    return "login";
}
```

#### 前台系统页面处理

shop-portal的login.ftl

```
<input type="hidden" id="redirectUrl" value="${redirectUrl!''}"/>
<script type="text/javascript">
   // 用户登录
   function userLogin() {
       $.ajax({
           url: "${ctx}/user/login",
           type: "POST",
           data: $("#formlogin").serialize(),
           dataType: "JSON",
           success: function (result) {
               if (200 == result.code) {
                   // 如果存在重定向url则重定向至该url
                   if ($("#redirectUrl").val()) {
                       location.href = $("#redirectUrl").val();
                       location.href = "${ctx}/index";
                   }
               } else {
                   layer.msg("用户名或密码错误,请重新输入!");
               }
           },
           error: function () {
               layer.alert("亲,系统正在升级中,请稍后再试!");
           }
       });
</script>
```

#### 测试

- 商城前台系统未登录然后访问订单系统,是否会跳转至商城前台系统登录页面
- 商城前台系统登录以后访问订单系统,是否可以进入订单系统index.ftl
- 商城前台系统未登录然后访问订单系统,是否会跳转至商城前台系统登录页面,如果这时候用户登录,是否可以跳回至订单系统index.ftl
- /// 商城前台系统安全退出以后访问订单系统,是否会跳转至商城前台系统登录页面
